

Name and surname: _____

Grade: _____ Date _____

Learning to calculate with the abacus

Length: 15 minutes

Material: pencil, colouring pencils
and abacus

session

6

activity 11:

Draw within the abacus and the clouds space

1. Represent in the abacus the number of triangles that appear in the clouds.
2. Draw within the cloud the number of triangles matching the number represented in the abacus.

Finally, colour in the triangles and abacus' beads.

Game 6

Length: 15 min

We are detectives

Main ability practised: Photographic Memory.

This game also enhances: Attention and Concentration, Creativity and Observation skills.

Divide the students into two groups; one group will be placed in a row in front of the whiteboard. The teacher will ask the other group to observe and retain all the details of their classmates: hairstyle, clothes, watch, shoes, headdress, bracelets, etc. Once the observation minute is over, the students who were in a row will leave the class and they will exchange items from their clothing (the teacher will leave with them and help them to do the swaps, if necessary). Upon entering again, others must guess which items have been changed. For every right answer, each team will get an extra point.
